Report Comments

The Turnaround Times report displays information about the time it took to verify CP and/or AP tests. The turnaround time (TAT) is defined as the time elapsed between the instant the specimen was received and the instant the test was first final verified. The TAT is calculated using the first received instant or the last received instant depending on the TAT basis setting that is specified in the laboratory and facility records.

The TAT compliance information is summarized on a chart to display what percentage of tests were on time by day, and there is a graph to show the total number of tests performed as well as how many of those were on time. This first graph is limited to showing the 25 tests with the greatest volume over the time interval specified. The On Time Threshold can be used to determine which tests are meeting on time percentage goals by shading values that meet the threshold in green, and shading those that do not in red.

The details of the report show the following time intervals: Ordered-Collected, Collected-Received, Received-First Preliminary Verify, Turnaround Time, Expected Turnaround Time and Overdue Time for each test verified in the specified date range. The group headers show averages of these time intervals and also the percentage of the tests that are TAT compliant in that group.

The report is able to be filtered on final verification dates and times, resulting lab, resulting section, test/protocol, test priority, order mode, collection department, submitter, and the types of tests (AP/CP/both), and to only show overdue tests. The report is also able to be grouped by up to three of the following: Resulting Lab, Resulting Section, Test/Protocol, Collection Department/Submitter, Order Mode, Priority/Case Type, Verifying/Responsible User, or Verified Date.
